

UPS Network Management Card

Embedded management of UPSs protecting servers and networking equipment.

Includes: CD with software, User Manual

Part Number : **AP9617**

APC's UPS Network Management Cards provide management of an individual UPS by connecting the UPS directly to the network with a dedicated IP address, avoiding the need for a proxy such as a server. Embedded technology provides exceptional reliability and enables the UPS to reboot hung equipment. Manage each APC UPS individually via web browser, Telnet, SNMP or via SSL and SSH. Notification features inform you of problems as they occur. For protected servers, the included PowerChute Network Shutdown software provides graceful, unattended shutdown in the event of an extended power outage.
